ASTHMA ANNUAL REVIEW

Patient: Lauren Bennett

DOB: 1991-04-18 (age 32)

NHS Number: 999 900 0009

Address: 4 Pelham Court, Leeds, LS6 2BN

Active Medical Conditions:

- Asthma (ICD-10: J45.909) — diagnosed 2010, childhood-onset
- Allergic rhinitis (ICD-10: J30.9)

Current Medications:

- Salbutamol 100 mcg MDI — PRN, 1-2 puffs as needed
- Cetirizine 10 mg OD — spring/summer for rhinitis

Allergies: NKDA. Hay fever (grass pollen).

Asthma control assessment: Patient reports salbutamol use 1-2 days per week, typically triggered by exercise or cold weather. No nocturnal waking with cough or wheeze. No exacerbations requiring oral steroids or A&E attendance in past 12 months. ACT (Asthma Control Test) score 22/25.

Examination: Chest clear on auscultation. PEFr 380 L/min (predicted 460 L/min, 83% of personal best). RR 16. SpO₂ 99% on room air.

Assessment: Asthma classification: **mild intermittent**. Control adequate on reliever-only regime per current symptom pattern and ACT score. No preventer indicated at present per BTS/SIGN step 1.

Plan:

- Continue salbutamol 100 mcg MDI PRN
- Inhaler technique reviewed and confirmed adequate
- Personalised asthma action plan provided
- Annual flu vaccine recommended (October)
- Review in 12 months or sooner if symptoms increase
